3M SCOTCHCAST ELECTRICAL RESIN 281

This data sheet was provided to you by Tewipack Uhl GmbH. The company tewipack Uhl GmbH assumes no responsibility for the topicality and the Accuracy of the information contained. The properties of the products can vary due to various influences such as composition and condition of the Substrate, impurities in or on the substrate, temperature and humidity at the Change storage and environmental conditions during use. Using this product in combination with other material, the customer is responsible for to check through our own tests whether the product is suitable for the planned combination and whether this combination delivers the expected results

3M™ Scotchcast™

Electrical Resin 281

Two-Part, Semi-Flexible, Filled,
Epoxy Liquid Resin

Data Sheet

May 2014

Product Description

3M™ Scotchcast™ Electrical Resin 281 is characterized by high temperature and electrical stability, and excellent retention of flexibility, even after prolonged heat aging. It can be cured at low temperatures, but the optimum properties are obtained with the higher temperature cure schedules. This resin should be used instead of 3M Scotchcast Electrical Resin 241 where greater mechanical strength, higher tensile strength, better thermal shock ad higher thermal conductivity are required.

Resin Features

- High temperature rating (155°C – Class F)
- Low temperature curing
- High thermal conductivity

Applications

Impregnation and encapsulation of coils, transformers, motors and other electrical and electronic components

Handling Properties

Mix Ratio (A, B)	Wt 2:3 Vol (%) 37:63
Initial Viscosity @ 23°C (73°F)	A = 320,000 cps B = 38,000 cps Mixed = 75,000 cps
Density	A = 1.53 kg/l (12.77 lbs/gal) B = 1.35 kg/l (11.26 lbs/gal)
Flash Point	A = 202°C (395°F) B = 188°C (370°F)
Gel Time	21 min. @ 121°C
Curing Guide	75°C (167°F) 24 hrs 95°C (203°F) 6-8 hrs 120°C (248°F) 2-3 hrs

Mixing	Mix the separate parts before removing them from their containers. They may be warmed to 60°C (140°F) to aid mixing. Weigh the correct proportions of the separate parts to within 2% accuracy and combine them. Thoroughly blend the mixture until the color is absolutely uniform, or until a homogenous mixture is attained.
De-aerating	Air introduced during mixing can be removed by evacuating for 5 to 15 minutes at 5 to 10 mm of mercury absolute pressure. Warming the resin to 60°C (140°F) aids air removal. The container side wall should be four times the height of liquid resin to contain the foaming that takes place under vacuum.
Casting and Impregnating	Pour the warm resin into the preheated 100°C mold. If no mold is used, dip the preheated part into the resin. Heating the resin and mold aids impregnation. For maximum impregnation, evacuate for 5 to 15 minutes at 5 mm of mercury absolute pressure, or pour under vacuum and hold for several minutes before releasing.
Curing	Where minimum stress and maximum shock resistance are required, the lower temperature cure cycle is recommended. Time should be added to the cure cycle to allow the resin to reach the curing temperature.
Handling & Safety	Read all Health Hazard, precautionary and First Aid statements found in the Material Safety Data Sheet (MSDS) and/or product label of chemicals prior to handling or use.
Shelf-Life & Storage	These resins have a 2 year shelf life following the date of manufacture when stored in a humidity controlled storage (10°C/50°F to 27°C/80°F and <75% relative humidity). It is 3M's standard procedure to ship any resin product with at least 50% of its shelf life remaining. Any special request for a specific shelf life requirement may require a larger than stated MOQ that justifies a non-scheduled product run. Contact your 3M sale representative or Customer Service for specific shelf life MOQ requirements. No product returns will be accepted on special shelf life request orders.
